PROFESSIONAL SUMMARY

Fourth-year BTech student in Artificial Intelligence and Machine Learning with hands-on experience in machine learning, deep learning, computer vision, NLP, data preprocessing, model training, evaluation, and Flask-based deployment. Skilled in Python, Scikit-learn, TensorFlow/Keras, OpenCV, Pandas, NumPy, and SQL, with project experience in CNN-based image classification, ECG analysis, and automated visual inspection, along with 45 days of software development internship experience.

TECHNICAL SKILLS

Programming & Data: Python, SQL, Pandas, NumPy, Matplotlib
Machine Learning: Scikit-learn, Logistic Regression, Classification, Feature Engineering, Data Preprocessing, Model Training, Model Validation, Hyperparameter Tuning, Train-Test Split, Cross Validation, Class Balancing, Threshold Optimization
Deep Learning & Computer Vision: Deep Learning, CNN, TensorFlow, Keras, OpenCV, Image Preprocessing, Image Augmentation, Transfer Learning
NLP & Analytics: NLP, TF-IDF, Text Preprocessing, Exploratory Data Analysis (EDA), Model Evaluation, Accuracy, Precision, Recall, F1-Score, Confusion Matrix, ROC-AUC
Tools & Deployment: Flask, Git, GitHub, Jupyter Notebook, Google Colab, VS Code, HTML, CSS, JavaScript

INTERNSHIP EXPERIENCE

STATIC INT | Intern | 45 Days

- Gained hands-on experience with Python, JavaScript, Node.js, and Flutter through practical development tasks.
- Built basic applications and mini-projects while learning frontend, backend, scripting, and mobile application development workflows.
- Strengthened programming, debugging, and problem-solving skills by working across multiple development technologies.

ACADEMIC PROJECTS

CNN-Based Cardiovascular Disease Prediction Using ECG Images

- Built a deep-learning pipeline using the PTB-XL ECG dataset to classify 12-lead ECG records into NORM, MI, STTC, CD, and HYP diagnostic categories.
- Generated standardized 224x224 ECG images and used patient-level train, validation, and test splits to reduce data leakage.
- Trained CNN/EfficientNetB0 models with class weighting, transfer learning, threshold tuning, and evaluation using precision, recall, Binary Accuracy, and multi-label AUC.

Automated Warehouse Inspection & Defect Detection System

- Designed an end-to-end computer vision workflow for conveyor-based warehouse inspection using YOLO-style object detection for real-time defect identification.
- Structured the pipeline as camera input -> edge inference -> local web interface -> cloud storage/database -> analytics dashboard for inspection history and defect tracking.
- Planned integration with S3, PostgreSQL, and a React/Streamlit dashboard, with an MLOps-oriented focus on deployment, monitoring, and traceable inspection records.

Skin Cancer Detection Using CNN

- Prepared HAM10000 image data using resizing, normalization, augmentation, and train-validation splitting for a TensorFlow/Keras CNN.
- Evaluated predictions using accuracy, precision, recall, and a confusion matrix; built a Flask interface with image upload and downloadable PDF prediction reports.

EDUCATION

BTech in Artificial Intelligence and Machine Learning | Fourth Year | Universal College of Engineering | CGPA: 7.20
Diploma in Computer Engineering | Thakur Polytechnic | 77.88%
10th Standard | Sheth Vidya Mandir English High School | 92.60%
